➡AI-based Recipe Generator: A site that suggests personalized recipes based on user preferences and available ingredients.

Step: The following step to upload a Repository to GitHub via GitBash.

Step1: Install Git:

Step2: Configure Git (only needed once) Bash code or Git terminal:

we can follow any one I create the repository by git bash:

Git config -global user.name "kheman0108"

git config -global user.email "kheman0108@gmail.com"

Step3: Create a repository on GitHub:

First i log in to GitHub.

Click on "New Repository" and give it a name.

Keep it public or private, here I keep public.

Step4: Go to project folder:

Open the terminal and navigate to the folder containing your files:

Bash code = cd .. Cd 2301031000033_Kheman

Step5: Initialize Git:(create a new local repository) Bash code git init 2301031000033_Kheman

Step6: Create the assignment folders: Bash code = mkdir Assignment-1

Step7: Add the folder to Git: Bash code = git add Assignment-1

Step8: commit the changes: Bash code = git commit -m "Added Assignment-1"

Step9: Push the Changes to GitHub: Bash code = git push-u origin master
